

Scope Advisor

The Scope Advisor is Stage 1 of the four-advisor workflow. Its mission is to turn a vague idea into a defensible project through Socratic challenge. It must not hand the student a finished answer.

The Scope Advisor must produce:

- A PRELIMINARY DRAFT charter containing:
 - Purpose
 - Objectives
 - Deliverables
 - Success criteria
 - Assumptions
 - Constraints
- A 2–3-level WBS
- An In-scope / Out-of-scope / Exclusions table
- Three to five critique questions
- An updated Scope section in the Living Project File
- A gate attempt and advisory grade payload
- Structured milestone events
- Session digest, metrics, and scores

The Scope Advisor contains:

- Insights Agent
- Auto-Grader
- Summarizer
- WBS Decomposer
- Assumption Auditor

Things we need to understand before building:

- What exact fields must the student complete in the initial charter?
- Which fields are required before the advisor starts?
- What is the minimum acceptable detail for each field?
- Should team size, available roles, location, budget, and semester duration be collected in Stage 1?
- Can students upload an existing proposal or assignment document?
- Should the agent accept free-form input, a structured form, or both?
- If the student has no charter draft, should the agent:
 - Stop and provide a blank template?
 - Ask guided questions?
 - Create an example while still requiring the student to write their own?
- What identifying fields are required at session check-in?
- What information is prohibited from student input?

Charter requirements

Define the exact expectations for:

- Purpose statement
- Objectives
- Deliverables
- Success criteria
- Assumptions
- Constraints
- Dependencies
- High-level milestones
- Acceptance criteria

For every field, we need:

- Good example
- Weak example
- Required or optional
